Recognition Program

Patients undergoing treatment for cancer are at risk for developing a wide spectrum of oral complications and adverse events. This course provides a practical, real world approach to the assessment, diagnosis, and management of the most frequently encountered and clinically relevant oral complications in cancer patients.

## LEARNING OBJECTIVES

1. Recognize the importance of oral health and understand the principles of good oral health in the oncology patient
2. Be able to assess risk and evaluate the oral cavity, including the dentition and soft tissues
3. Understand the guiding principles of oral health management in the oncology patient
